Jakub Wiśniewski

Education

2023–Present **Bachelor of Data Science**, *Katholische Universität Eichstätt-Ingolstadt*, Ingolstadt.

2019–2023 **IT Specialist**, *Mikołaj Kopernik Telecommunications Technical School*, Poznań.

Experience

01/2026–Present **Student Research Assistant**, Katholische Universität Eichstätt-Ingolstadt, Germany.

- Supported the Geography research group in accessing and using the FAU HPC cluster (Linux/SLURM).
- Wrote step-by-step documentation for Windows users (SSH setup, key generation, remote access).
- Assisted with file management, data transfer, and running computational programs on the cluster.
- Troubleshot access and execution issues for non-technical researchers.

08/2025–10/2025 **Data Scientist**, Kimball Electronics, Poland.

- Supported IT operations (user access, permissions) and contributed to database development (SQL optimization, triggers, stored procedures).
- Analyzed production-adjacent datasets (scrap/repair, forecasts, packaging) and built proof-of-concept ML prototypes (Repair vs. Scrap classification, TopLineForecast).
- Designed a proof-of-concept application to visualize Repair vs. Scrap predictions, supporting decision-making for factory-floor users.
- Improved system reliability by refining trigger logic and enhancing data processing workflows.
- Worked in Agile (Scrum/Kanban) with Azure DevOps/Git and delivered technical presentations to mixed technical and business audiences.

11/2021–12/2021 **IT Intern**, Kimball Electronics, Poland.

- Assisted with internal .NET tooling maintenance and automated administrative workflows using Excel/VBA.

Skills

Programming: Python (Pandas, NumPy, Scikit-learn, SciPy), Machine Learning, Model Evaluation, Data Visualization (Matplotlib, Seaborn, Plotly), SQL, REST API (Flask, FastAPI), Jupyter Notebooks, Git, GitHub

Data & Tools: PostgreSQL, SQL Server, Redis, Docker, AWS, Azure DevOps, HPC (SLURM), PowerBI, ETL Pipelines, Data Warehousing

OS: Linux (Bash, SLES), macOS, Windows

Projects

PageRank-Based Analysis of Scientific Papers.

- Built a scalable framework for bibliometric analysis using the PageRank algorithm to assess research influence across millions of papers.
- Developed a distributed crawler for Semantic Scholar data, implementing robust storage with PostgreSQL and Redis.
- Engineered a custom PageRank algorithm on an HPC cluster, enabling large-scale computations with real-time monitoring via FastAPI.

KULTour, *Hackathon Winner (Best Open Source)*.

- Built a travel recommendation app in a 24h hackathon (Tourism Technology Festival, Salzburg).
- Implemented an ML-based recommendation approach and an interactive map UI for route/POI exploration.
